## General

Inside RBA mBIZ mobile banking for business entities the QR code and HUB3A payment slip creation functionality has been implemented, which simplifies requesting payments.

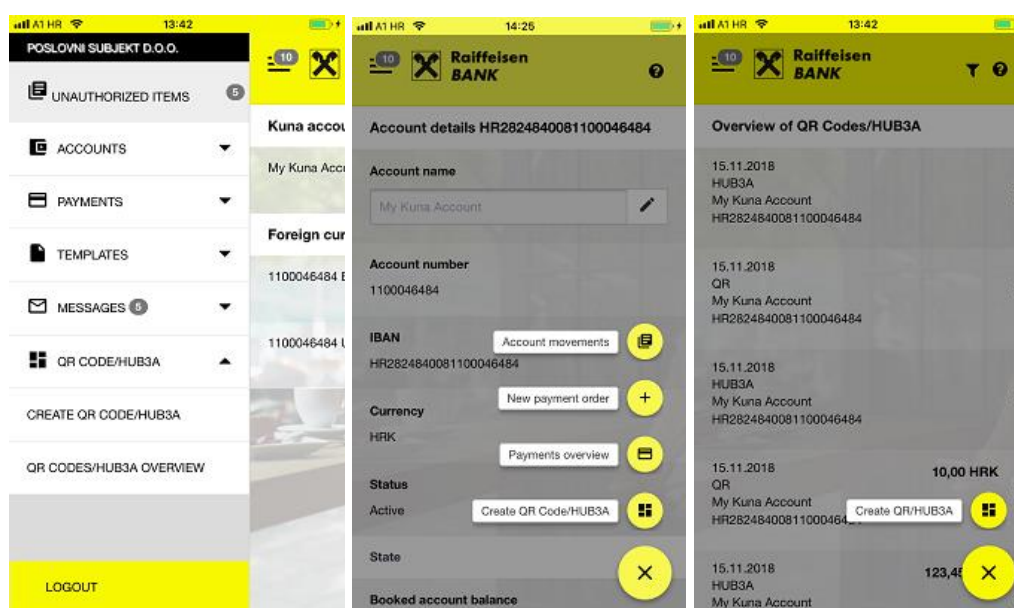

Also, initiating Kuna payment orders with the uploaded QR Code or (HUB3A payment slip with) 2D barcode was implemented, shortening the time to enter payment order and prepare it for execution.

- The QR Code can be created in *.PNG* format and the (HUB3A payment slip with) 2D barcode in *.PDF* format
- The Kuna payments can be initiated by uploading the QR Code in *.PNG/.JPG* format and the (HUB3A payment slip with) 2D barcode in *.PDF* format

## Accessing screen for creating the QR Code or the HUB3A payment slip with 2D barcode

The screen *QR Code & HUB3A* can be accessed in 3 ways:

1. Through the RBA mBIZ menu *QR Code/HUB3A – Create QR Code/ HUB3A* (Picture 1),
2. using the *Create QR Code/HUB3A* action  on Account details screen (Picture 2) or
3. using the *Create QR Code/HUB3A* action  on *Overview of QR Codes/HUB3A* screen (Picture 3)

## Create and send the QR Code

By entering the screen *QR Code & HUB3A*, form for creating the QR Code is offered by default. Filling the form isn't mandatory, but can be filled with the additional information (Picture 4). Mandatory data such as the Payee's name, the Payee's address, and the Payee's place of residence are automatically withdrawn from system while creating the QR Code.

If the creation was initiated on the *Account Details* screen, as the Payee's account is offered the account from which creation was initiated.

If the creation was initiated from the menu *QR Code/HUB3A – Create QR Code/ HUB3A*, as the Payee's account is offered the first account from the list, as specified in *Settings*.

If there is more than one Payee's account it can be changed.

Fields:

- Type:
  - QR Code
  - HUB3A

*Payee*

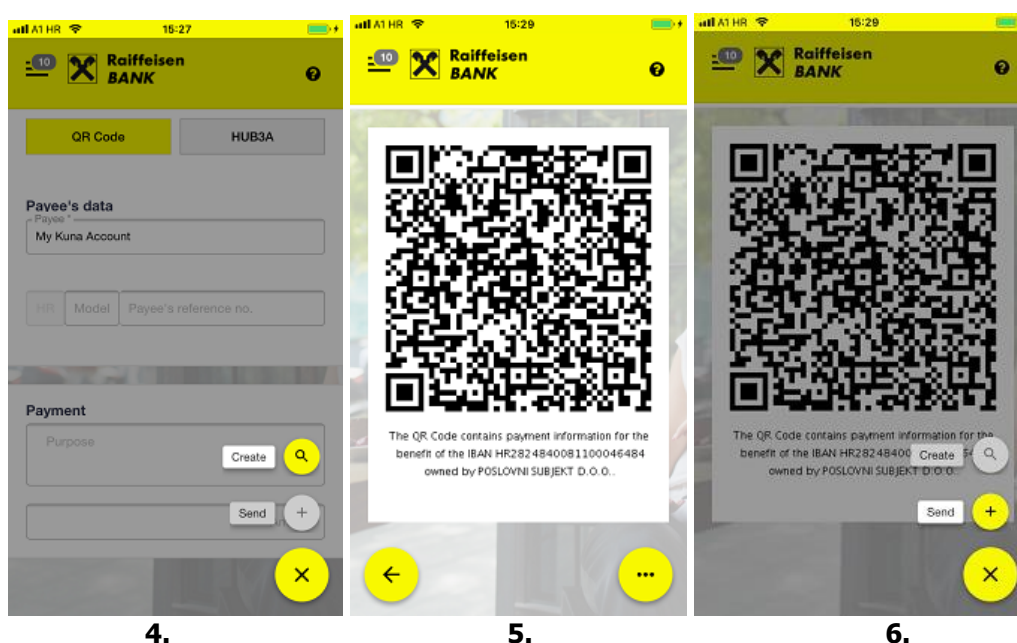

- Payee's account number – mandatory field
- Payee's model code & reference no. – optional
- Payment description – optional
- Amount – optional

By using the *Create* action, placed below entering form, the *QR Code preview* is shown (Picture 5) as well as the *Send* action (Picture 6).

If any data is changed in entering form before sending, the *Send* action becomes the *Create* action once again.

The *Send* action opens application select dialog (Pictures 7–9). After selecting wanted messenger or e-mail application, functionality is resumed in accordance with messenger or e-mail application settings of the device owner.

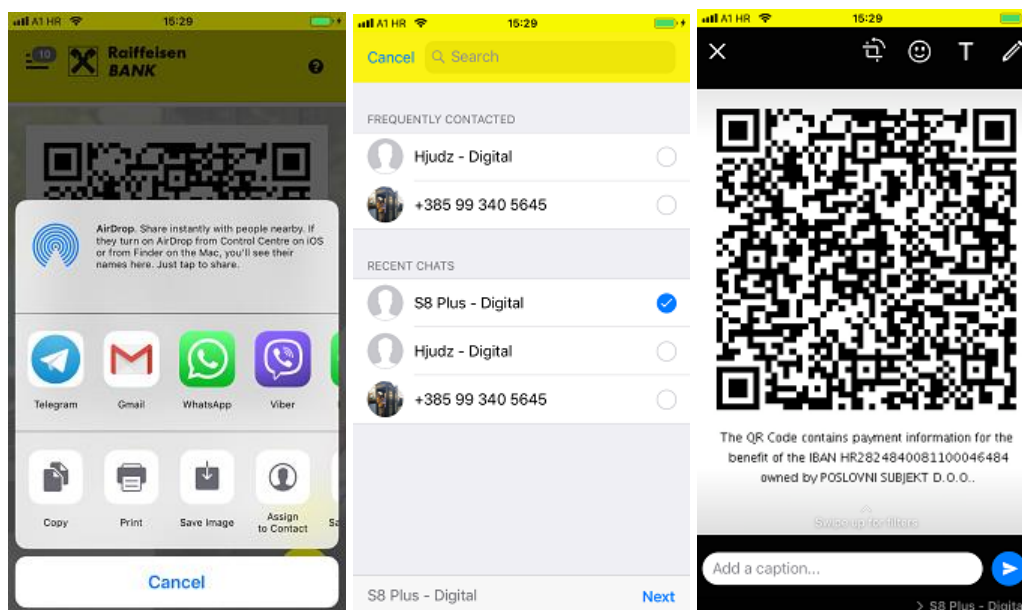

In the sent image there is a QR code that contains all the selected and entered data and is listed for the benefit of specific account/IBAN and the owner of the account.

## Create the HUB3A payment slip with 2D barcode

By entering the screen *QR Code & HUB3A*, form for creating the QR Code is offered by default. By changing the type to *HUB3A* enter form is changed (Picture 10).

Mandatory data such as the Payee's name, the Payee's address, and the Payee's place of residence are automatically withdrawn from the system while creating the HUB3A payment slip with 2D barcode. Filling the form isn't mandatory, but can be filled with the additional information.

If the creation was initiated on the *Account Details* screen, as the Payee's account is offered account from which creation was initiated.

If creation was initiated from the menu *QR Code/HUB3A – Create QR Code/ HUB3A*, as the Payee's account is offered first account from the list.

If there is more than one Payee's account it can be changed.

Fields:

- Type:
  - QR Code
  - HUB3A

*Payee*

- Payee's account number – selection available, mandatory field
- Payee's model code & reference no. – optional

*Payer*

- Payer's name – optional
- Payer's address – optional
- Payer's place of residence – optional
- Payer's model code & reference no. – optional

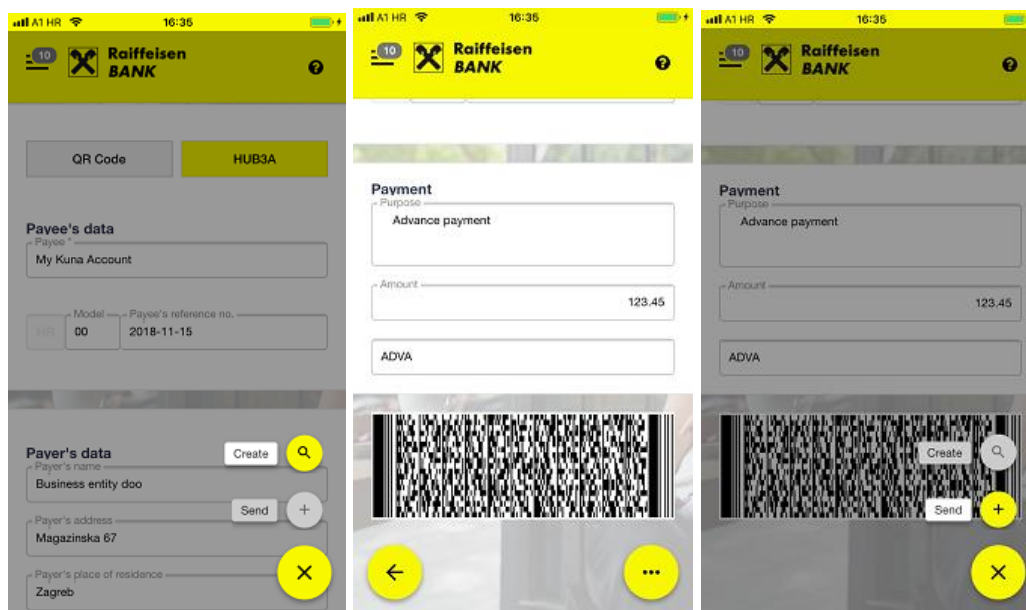

- Payment description – optional
- Amount – optional
- Purpose code – optional

By using the *Create* action, placed below entering form, the 2D code (Picture 11) from future HUB3A payment slip is shown, as well as the *Send* action (Picture 12).

If any data is changed in entering form before sending, the *Send* action becomes the *Create* action once again.

The *Send* action opens application select dialog (Pictures 13-15). After selecting wanted messenger or e-mail application, functionality is resumed in accordance with messenger or e-mail application settings of the device owner.

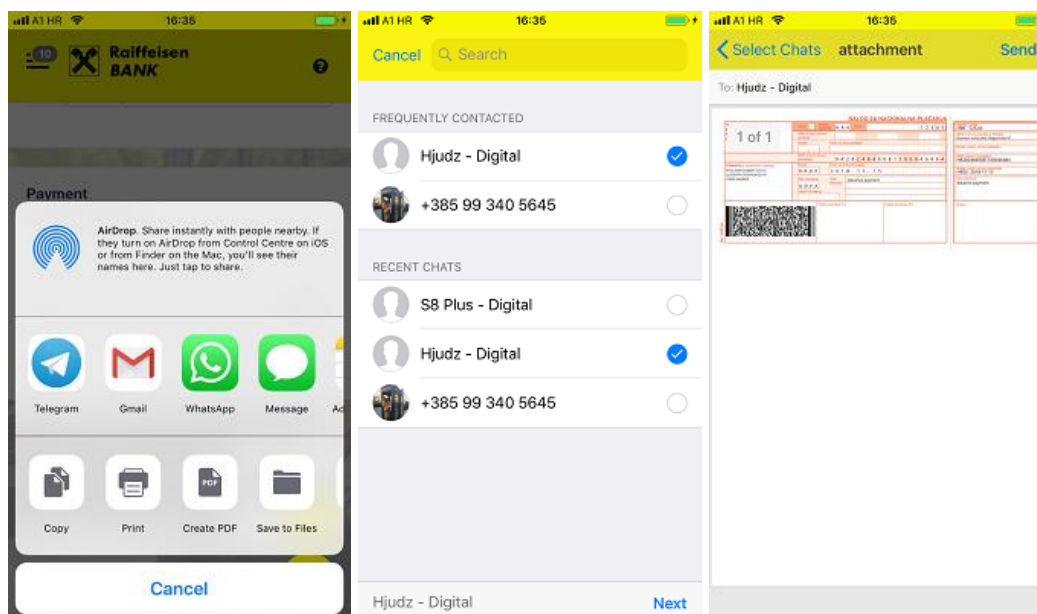

In the sent PDF there is a HUB3A payment slip with 2D barcode that contains all the selected and entered data and is listed for the benefit of specific account/IBAN and the owner of the account.
